Assignment 04: Optimal Weight for Weighted Color Transfer

授課教師:王宗銘

2023/03/08

- 1. 請寫 2 個 python 程式,分別利用暴力法(brute force, 代碼 Bru)與二元分割 (binary partition,代碼 Bin),藉由量測影像的 histogram distance 求出 weighted color transfer 三個色彩頻道 red, green, blue 的 optimal weight。請使用 OpenCV 或 SCIPY 提供的函數算出 histogram distances。
- 2. 暴力法(brute force)與二元分割(binary partition)的作法敘述,請見課程投影片。茲節錄如下:

Brute Force Method:

A similar idea can be used to determine the optimal weight used for weighted color transfer (brute force approach)

- Step 1: generating 101 weighted color transfer images using weights from $w_1=0.00$, $w_2=0.01$, ..., $w_{100}=0.99$, $w_{101}=1.00$
- Step 2: calculating and recording histogram distance, say ds_i (i=0, 1, ..., 101) using source image as the query image.
- Step 3: calculating and recording histogram distance, say dt_i (i=0, 1, ..., 101) using target image as the query image.
- Step 4: Visiting each index i, when $ds_j \cong dt_j$ for some j, select the corresponding weight, w_j , which represents the optimal weight, w_o .

Binary Partition

A similar idea can be used to determine the optimal weight used for weighted color transfer using binary search (binary partition)

- Step 1: set an initial weight (w) and produce the corresponding WCT image, Iw.
- Step 2: derive two histogram distances, D(Source, Iw) and D(Target, Iw)
- Step 3: determine whether D(S, Iw) and D(T, Iw) are close enough, i.e.,
 D(S, Iw) ≅ D(T, Iw), to decide any process is needed to carry on.
- Step 4: if carrying on, modify the weight to be w', and produce the corresponding WCT image, Iw'.

 if not carrying on, the current weight represents the optimal weight,
- Step 5: Go to Step 3 to determine the suitability of the current weight.
- 3. 繳交檔案: 請壓縮成一個 zip 或 rar,例如檔案名稱: 學號-ass04.rar,包含下列 2 個目錄
- (1) program 目錄:內含
 - a. 2 個 python 程式,程式名稱:

brute force 方法:學號-04-WCT-Bru.py binary partition 方法:學號-04-WCT-Bin.py python 版本不侷限,但請盡量用較新版本。請確認程式是可執行的。 b. readme.txt。 敘述如何執行 python 程式。

- (2) source 目錄, source image 6 張。(自選) 建議兩個方法使用一樣的影像,以便比較。
- (4) target 目錄, target image 6 張。(自選) 建議兩個方法使用一樣的影像,以便比較。
- (5) result 目錄, result image 6 張。請將 r, g, b optimal weight 及方法寫在檔案名稱,以資區別。例如:

第 6 張 WCT 結果影像,使用 binary partition,R,G,B 頻道之 weight 分別為 0.2518, 0.3045, 0.7812,则名稱為: WCT06-Bin-0.2518-0.3045-0.7812.png 第 3 張 WCT 結果影像,使用 brute force,R,G,B 頻道之 weight 分別為 0.39, 0.36, 0.85,则名稱為: WCT03-Bru-0.39-0.36-0.85.png
